

GenAI for SAP SuccessFactors Testing

AI-Powered Test Automation & Strategy Guide

TABLE OF CONTENTS

1. Introduction & Overview
 2. SAP SF Testing Fundamentals
 3. AI-Powered Test Case Generation (10 prompts)
 4. Automated Test Script Writing (8 prompts)
 5. Test Data Management with AI (5 prompts)
 6. Defect Management & Automation (4 prompts)
 7. Performance Testing with AI (3 prompts)
 8. Advanced Testing Techniques
 9. Results & ROI
 10. Tool Comparison & Integration
-

INTRODUCTION

The Problem:

- SAP SuccessFactors projects are complex (100+ modules)
- Test case creation takes 40-60% of testing timeline
- Manual testing is repetitive and error-prone
- Maintaining test cases is time-consuming
- Scaling tests across modules is difficult

The Solution:

- Use AI to generate test cases in minutes (not days)
- Automate repetitive testing tasks
- Create intelligent test data
- Reduce defect escape rate

- Accelerate go-live timeline

This Guide Gives You:

- ✓ 30+ production-ready testing prompts
 - ✓ AI workflows for test automation
 - ✓ Real-world testing scenarios
 - ✓ Integration patterns with SAP SF
 - ✓ Case studies and results
-

PART 1: SAP SF TESTING FUNDAMENTALS

SAP SuccessFactors Testing Scope

Core Modules to Test:

1. **Employee Central (EC)** - Employee data, org structure
2. **Recruiting (RCM)** - Job requisitions, candidates
3. **Onboarding (ONB)** - New hire experience
4. **Learning** - Training, certifications
5. **Performance Management (PM)** - Goals, reviews, ratings
6. **Compensation** - Salary planning, budgeting
7. **Time Management (TM)** - Timesheets, attendance
8. **Succession Planning (SP)** - Talent pipeline
9. **Talent Management (TM)** - Development, mobility
10. **Analytics** - Reports, insights

Testing Phases

Design Phase (Week 1-4)

↓

Build Phase (Week 5-12) → Test case preparation

↓

Unit Testing (Week 13-16)

↓

Integration Testing (Week 17-20)

↓

UAT (Week 21-28) ← Major testing phase

↓

Performance Testing (Week 29-30)

↓

Go-Live (Week 31)

Testing Challenges Addressed by AI

1. **Speed:** 50% faster test case creation
 2. **Quality:** Consistent coverage, fewer gaps
 3. **Maintenance:** Auto-update test cases
 4. **Scalability:** Scale across modules
 5. **Compliance:** Ensure regulatory testing
-

PART 2: AI-POWERED TEST CASE GENERATION (10 Prompts)

Prompt 1: Employee Central Test Cases

You are an expert SAP SuccessFactors testing specialist with 15+ years experience.

Context: Employee Central module testing for a global enterprise (50,000 employees, 16 countries).

Requirements:

- New employee creation
- Employee data updates
- Org structure maintenance
- Multiple country-specific fields

Task: Generate comprehensive test cases covering:

1. Happy path scenarios (5 cases)
2. Error scenarios (4 cases)
3. Edge cases (3 cases)
4. Integration scenarios (2 cases)

For each test case, provide:

- Test Case ID
- Module: Employee Central
- Description
- Prerequisites
- Test Steps (numbered)
- Expected Result
- Pass/Fail Criteria
- Data Required
- Risk Level (High/Medium/Low)

Format: Structured test case document (30+ test cases total)

Focus: SAP SF Employee Central Module

Prompt 2: Recruiting Module Test Cases

You are an expert SAP SF Recruiting testing specialist.

Module: Recruitment Management (RCM)

Scope: Job requisitions, postings, candidate management, offers

Complexity: Multi-country hiring with compliance requirements

Task: Generate test cases for:

1. Requisition Lifecycle (4 cases)

- Create requisition
- Approve requisition
- Publish job posting
- Close requisition

2. Candidate Management (5 cases)

- Candidate application
- Resume upload
- Interview scheduling
- Offer creation
- Offer acceptance

3. Multi-country Scenarios (4 cases)

- India hiring (ESIC, PF compliance)
- UK hiring (legal compliance)
- US hiring (I-9 requirements)
- Cross-border hiring

4. Error Scenarios (3 cases)

- Missing required fields
- Budget exceeded
- Invalid job grade

Format: Test case document with all details

Prompt 3: Onboarding Module Test Cases

You are an expert SAP SF Onboarding testing specialist.

Onboarding Process:

- Pre-hire steps
- Day 1 activities
- First week orientation
- First month check-ins
- 90-day reviews

Task: Create test cases for:

1. New Hire Data Collection (4 cases)

- Self-service form completion
- Document upload (ID, address proof)
- Emergency contact information
- Bank account details

2. Manager Activities (5 cases)

- Approve new hire data
- Assign mentor
- Create onboarding plan
- Track progress

3. Buddy/Mentor Functions (4 cases)

- Buddy assignment
- Task allocation
- Feedback provision
- Completion tracking

4. Integration Points (3 cases)

- EC data sync
- Payroll activation
- IT access provisioning
- Learning platform enrollment

Format: Comprehensive test case suite (16+ cases)

Prompt 4: Time Management Module Test Cases

You are an expert SAP SF Time Management testing specialist.

Module: Time & Attendance

Scope: Timesheet entry, approvals, integrations

Complexity: Multi-shift, part-time, contractor management

Task: Generate test cases for:

1. Timesheet Entry (5 cases)
 - Daily entry (8 hours)
 - Overtime entry
 - Leave combination
 - Rounding rule application
 - Weekend entry
2. Approval Workflow (4 cases)
 - Manager approval
 - Escalation path
 - Rejection with reason
 - Final approval
3. Integrations (4 cases)
 - Payroll integration
 - Biometric system sync
 - Attendance device sync
 - Leave balance update
4. Edge Cases (3 cases)
 - Negative hours entry
 - Mid-month leave
 - Work from home
 - Holiday scenarios

Format: 16+ test cases with full details

Prompt 5: Compensation Module Test Cases

You are an expert SAP SF Compensation testing specialist.

Module: Compensation Management

Scope: Salary planning, merit increase, bonuses

Task: Create test cases for:

1. Salary Planning Cycle (5 cases)
 - Create salary plan
 - Distribute budget
 - Manager planning
 - Employee viewing
 - Approval workflow
2. Merit Increase Process (4 cases)
 - Recommend increase %
 - Apply salary grade rules
 - Currency conversion (for global)
 - Validation checks
3. Bonus Calculation (4 cases)
 - Monthly bonus
 - Annual bonus
 - Performance-linked bonus
 - Proration (new hire/exit)
4. Compliance (3 cases)
 - Min/max salary validation
 - Grade-based limits
 - Regulatory compliance
 - Documentation

Format: 16+ comprehensive test cases

Prompt 6: Performance Management Test Cases

You are an expert SAP SF Performance Management testing specialist.

Module: Performance & Goals

Scope: Goal setting, mid-year review, final rating

Task: Generate test cases for:

1. Goal Setting (5 cases)

- Create goal
- Align goals (parent-child)
- Set weight percentages
- Manager approval
- Employee acknowledgment

2. Mid-Year Review (4 cases)

- Progress update
- Comment addition
- Feedback from reviewers
- Adjustment of ratings
- Manager consolidation

3. Final Rating (4 cases)

- Input final rating
- Calculate performance rating
- Apply rating distribution rules
- Notification to employees
- Documentation

4. Calibration (3 cases)

- Manager calibration session
- Rating curve validation
- Peer comparison
- Adjustment capability

Format: 16+ test cases with all steps

Prompt 7: Integration Test Cases (Multiple Modules)

You are an expert SAP SF integration testing specialist.

Scenario: New Employee Hiring to Onboarding to Payroll

Task: Create integration test cases for:

1. Recruiting → EC → Onboarding (2 cases)
 - Offer acceptance triggers EC create
 - EC data flows to Onboarding
 - Onboarding completion triggers payroll
2. EC → Payroll → Benefits (2 cases)
 - Employee creation triggers payroll setup
 - Salary data flows to payroll
 - Benefits elections processed
3. Time Management → Payroll Integration (2 cases)
 - Approved timesheets flow to payroll
 - Overtime calculated correctly
 - Leave impact on payroll
4. Performance → Compensation Integration (2 cases)
 - Performance rating feeds compensation
 - Merit budgets distributed
 - Final increases processed

Format: Integration test scenarios (8+ detailed cases)

Prompt 8: Data-Driven Test Cases

You are an expert data-driven testing specialist for SAP SF.

Task: Create parameterized test cases that test multiple data combinations:

1. Employee Creation Test

Test with data combinations:

- 3 countries (India, UK, US)
- 3 employment types (Full-time, Part-time, Contractor)
- 3 departments (Engineering, HR, Finance)
- Result: 27 test scenarios from 1 test case

2. Salary Grade Validation

Test with:

- 5 salary grades
- 10 salary ranges each
- 3 currency types
- Result: 150 test scenarios

3. Leave Type Combinations

Test with:

- 5 leave types
- 4 employee categories
- 3 countries
- Result: 60 test scenarios

Format: Data-driven test case template with data tables

Prompt 9: Performance Testing Test Cases

You are an expert SAP SF performance testing specialist.

Task: Generate performance test cases for:

1. Load Testing (5 cases)

- 1,000 concurrent users creating employees
- 500 users submitting timesheets
- 250 users in salary planning
- 100 users in performance management
- Expected performance thresholds

2. Stress Testing (4 cases)

- System under 150% normal load
- Peak load during month-end
- Peak load during appraisal season
- Simultaneous approvals by 1,000 managers

3. Spike Testing (3 cases)

- Sudden spike in timesheet submissions
- Recruiting requisition posting
- Leave request surge

Format: Performance test cases with success criteria

Prompt 10: Negative & Exception Test Cases

You are an expert in negative and exception testing.

Task: Generate 25+ negative test cases covering:

1. Input Validation (6 cases)

- Blank mandatory fields
- Invalid date formats
- Negative salary values
- Special characters in names
- Exceeding max length
- Decimal values where not allowed

2. Business Rule Violations (8 cases)

- Employee grade < Job grade
- End date before start date
- Timesheet exceeding max hours
- Salary exceeding grade max
- Closing requisition with open positions
- Creating duplicate employee

3. Authorization/Security (6 cases)

- Non-HR viewing payroll
- Employee approving own requisition
- Viewing other country data
- Modifying locked records
- Accessing future periods

4. Data Integrity (5 cases)

- Orphaned records
- Missing parent records
- Circular dependencies
- Data consistency violations
- Transaction rollback scenarios

Format: Comprehensive negative test case suite

PART 3: AUTOMATED TEST SCRIPT WRITING (8 Prompts)

Prompt 11: Selenium Test Script Generator

You are an expert Selenium test automation engineer for SAP SF.

Language: Java with TestNG

Framework: Page Object Model (POM)

Task: Generate Selenium test script for:

"Create a new employee in SAP SuccessFactors Employee Central"

Functional Steps:

1. Login to SAP SF
2. Navigate to Employee Central
3. Click "Create New Employee"
4. Fill in required fields (First Name, Last Name, Email, Department, Job Grade)
5. Select country and legal entity
6. Save
7. Verify success message

Deliverables:

1. Page Object class (Employee Central page)
2. Test class with test methods
3. Utility class for common actions
4. Test data class
5. Assertions and validation

Format: Complete, executable Java code

Prompt 12: UFT/Unified Functional Testing Script

You are an expert UFT automation engineer for SAP SF.

Tool: UFT (Unified Functional Testing) / Micro Focus
Technology: VBScript

Task: Create UFT automation script for:
"Approve SAP SF Recruitment Requisition"

Steps:

1. Launch SAP SF
2. Login with manager credentials
3. Navigate to Recruiting
4. Search for pending requisitions
5. Select requisition
6. View details
7. Add approval comments
8. Submit approval
9. Verify approval completion

Deliverables:

1. Main test script (VBScript)
2. Shared Object Repository
3. Business Process Library (for reusability)
4. Data table for test data
5. Recovery scenarios

Format: Complete UFT test script

Prompt 13: API Testing Script

You are an expert REST API testing engineer for SAP SF.

Task: Create API test automation for SAP SF OData Services:

Test Scenario: Create Employee via API

API Details:

- Endpoint: /odata/v2/Employees
- Method: POST
- Content-Type: application/json

Deliverables:

1. Request body with all required fields
2. Postman collection JSON
3. Test assertions (status code, response fields)
4. Data validation checks
5. Error handling tests
6. Load test configuration

Also provide:

- Curl command examples
- Python requests script
- Response validation

Format: API testing guide with executable examples

Prompt 14: Mobile App Testing Script

You are an expert mobile testing specialist for SAP SF mobile app.

Platform: iOS + Android (Appium)

Scenario: Submit Timesheet via Mobile App

Task: Create Appium automation script:

Test Steps:

1. Launch SAP SF mobile app
2. Login
3. Navigate to Timesheets
4. Enter hours for each day
5. Add comments
6. Submit timesheet
7. Verify confirmation message

Deliverables:

1. Appium test script (Java/Python)
2. Desired capabilities for iOS
3. Desired capabilities for Android
4. Locators for mobile elements
5. Mobile-specific assertions
6. Screenshot comparison

Format: Cross-platform mobile test automation

Prompt 15: BDD Test Scripts (Gherkin)

You are an expert Behavior-Driven Development (BDD) specialist.

Tool: Cucumber/Gherkin

Language: Java with Cucumber

Task: Create BDD test scenarios for SAP SF:

Scenario 1: Employee Approval Workflow

Scenario 2: Salary Review Process

Scenario 3: Leave Application Process

Deliverables:

1. Feature files (.feature) in Gherkin syntax
2. Step definition classes
3. Test runner configuration
4. Hook class for setup/teardown
5. Report generation

Format: Complete BDD test framework

Prompt 16: Regression Testing Automation

You are an expert regression testing specialist for SAP SF.

Task: Create regression test suite covering:

Core Regression Areas:

1. Employee Central (10 test cases)
2. Recruiting (8 test cases)
3. Onboarding (6 test cases)
4. Performance Management (6 test cases)
5. Compensation (5 test cases)
6. Time Management (5 test cases)

Deliverables:

1. Master test suite structure
2. Individual test scripts
3. Execution order specification
4. Parallel execution configuration
5. Report aggregation setup
6. Failure notification mechanism

Format: Regression test automation framework

Prompt 17: Continuous Integration (CI) Setup

You are an expert CI/CD specialist for test automation.

Tools: Jenkins, GitHub, Selenium

Task: Create CI/CD pipeline for SAP SF test automation:

Pipeline Stages:

1. Code checkout
2. Test execution (parallel)
3. Results aggregation
4. Report generation
5. Failure notifications
6. Artifact storage

Deliverables:

1. Jenkinsfile (pipeline as code)
2. GitHub Actions workflow (YAML)
3. Test execution scripts
4. Result parsing logic
5. Email notification template
6. Report HTML template

Format: Fully functional CI/CD configuration

Prompt 18: Test Result Analysis & Reporting

You are an expert test analytics specialist.

Task: Create test result analysis and reporting system:

Metrics to Track:

1. Pass/Fail/Skip rates
2. Execution time trends
3. Defect density
4. Test coverage
5. Flaky test identification
6. Performance metrics

Deliverables:

1. SQL queries for data extraction
2. Dashboard creation (Tableau/PowerBI)
3. Automated report generation
4. Trend analysis
5. Executive summary template
6. Actionable insights generation

Format: Complete test analytics framework

PART 4: TEST DATA MANAGEMENT WITH AI (5 Prompts)

Prompt 19: Test Data Generation

You are an expert test data specialist for SAP SF.

Task: Generate production-like test data for:

1. Employee Master Data (500 employees)

- Required fields: First Name, Last Name, Email, Phone, Hire Date
- Variations: Multiple countries, departments, job levels
- Format: CSV ready for upload

2. Payroll Data (500 employees × 12 months)

- Salary, bonus, deductions
- Country-specific compliances
- Format: Excel with formulas

3. Organizational Data

- Company structure (5 levels)
- Department hierarchy
- Reporting relationships

Deliverables:

- Excel templates with sample data
- Data generation scripts
- Data validation rules
- Refresh automation

Prompt 20: Anonymized Production Data

You are an expert data privacy and de-identification specialist.

Task: Create process to use production data safely in testing:

Steps:

1. Extract production data
2. Anonymize sensitive fields
3. Maintain data relationships
4. Ensure compliance (GDPR, CCPA)
5. Validate de-identified data

Deliverables:

1. De-identification rules
2. SQL scripts for anonymization
3. Data validation checklist
4. Compliance verification
5. Before/after data samples

Prompt 21: Master Data Management

You are an expert Master Data Management (MDM) specialist.

Task: Create MDM structure for SAP SF testing:

Core Master Data:

1. Chart of Accounts
2. Cost Centers
3. Job Grades
4. Pay Grades
5. Countries
6. Company Codes
7. Legal Entities
8. Departments
9. Locations
10. Employee Groups

Deliverables:

1. MDM hierarchy documents
2. Configuration guides
3. Upload templates
4. Dependency mappings
5. Validation rules

Prompt 22: Dynamic Test Data Strategy

You are an expert in dynamic test data management for SAP SF.

Challenge: Test data must be fresh, valid, and non-conflicting

Task: Design dynamic test data system:

Components:

1. Automated data generation
2. Data uniqueness validation
3. Relationship maintenance
4. Cleanup after tests
5. Data refresh schedule

Deliverables:

1. Data generation framework
2. Data cleanup scripts
3. Validation automation
4. Documentation

Prompt 23: Compliance Data Testing

You are an expert in compliance and regulatory testing for SAP SF.

Task: Create test data for compliance scenarios:

Compliance Areas (by Country):

1. India (ESIC, PF, PT, GST)
2. UK (PAYE, NI, Pension)
3. US (Federal, State, FICA)
4. Germany (Tax, Social, Works Council)
5. Singapore (CPF, Tax, Levy)

For each:

- Test employees with compliant data
- Tax calculation scenarios
- Deduction validations
- Reporting requirements

Deliverables:

1. Compliance test data sets
2. Validation rules by country
3. Report samples
4. Exception handling

PART 5: DEFECT MANAGEMENT & AUTOMATION (4 Prompts)

Prompt 24: Defect Report Generation

You are an expert in defect documentation and reporting.

Task: Create template and automation for defect reporting:

For each defect, capture:

1. Defect ID (auto-generated)
2. Title and description
3. Severity (Critical/High/Medium/Low)
4. Priority (P0-P4)
5. Module affected
6. Steps to reproduce (detailed)
7. Expected vs. Actual result
8. Screenshots/logs
9. Environment details
10. Assigned to
11. Status tracking

Deliverables:

1. Defect template
2. Log capture script (automatic screenshots)
3. Email notification template
4. Status dashboard
5. Trending analysis

Prompt 25: Defect Automation Workflow

You are an expert in test automation defect handling.

Task: Automate defect creation from failed tests:

Workflow:

1. Test fails
2. Screenshot captured automatically
3. Log files attached
4. Defect template pre-filled
5. Created in defect tracking system
6. Notification sent to developer
7. Status tracked automatically

Deliverables:

1. Failure capture script
2. Jira/Azure automation (API)
3. Email template
4. Status tracking dashboard
5. SLA monitoring

Integration with:

- Jenkins (CI trigger)
- GitHub (code repo reference)
- Jira (defect tracking)

Prompt 26: Flaky Test Detection & Resolution

You are an expert in identifying and fixing flaky tests.

Challenge: Some tests pass sometimes, fail sometimes (flaky tests)

Task: Create flaky test detection system:

Components:

1. Run same test 10 times
2. Track pass/fail pattern
3. Identify flakiness
4. Root cause analysis
5. Fix or quarantine

Deliverables:

1. Flaky test detection script
2. Analysis dashboard
3. Root cause templates
4. Fix recommendations
5. Quarantine mechanism

Prompt 27: Test Quality Metrics

You are an expert in test quality analytics.

Task: Create metrics to measure test effectiveness:

Metrics:

1. Test coverage %
2. Defect escape rate
3. False positive rate
4. Test execution time trend
5. Maintenance burden
6. ROI of automation

Dashboards:

1. Daily test status
2. Weekly trend analysis
3. Monthly quality report
4. Executive summary

Deliverables:

1. Metric definitions
2. SQL queries
3. Dashboard templates
4. Report automation

PART 6: PERFORMANCE TESTING WITH AI (3 Prompts)

Prompt 28: Load Test Scenario Creation

You are an expert SAP SF performance testing specialist.

Task: Create load test scenarios:

Scenario 1: Month-End Close

- 1,000 employees submitting timesheets
- 500 managers approving
- 100 payroll analysts finalizing
- Duration: 4 hours (peak)

Scenario 2: Appraisal Season

- 2,000 managers entering ratings
- 5,000 employees viewing reviews
- 100 administrators moderating
- Duration: 2 weeks sustained

Scenario 3: Hiring Surge

- 500 new requisitions
- 10,000 job applications
- 2,000 interviews scheduled
- Duration: 1 week

Deliverables:

1. Load test scripts (JMeter)
2. Think time configuration
3. Ramp-up profiles
4. Success criteria
5. Performance baseline expectations

Prompt 29: Performance Bottleneck Analysis

You are an expert in SAP SF performance optimization.

Task: Analyze and identify performance bottlenecks:

Analysis Areas:

1. Database query performance
2. API response times
3. UI rendering time
4. Integration delays
5. Report generation
6. Batch job duration

Tools & Methods:

1. JMeter for load simulation
2. Application Insights for monitoring
3. Database query analyzer
4. Network trace analysis

Deliverables:

1. Bottleneck report
2. Root cause analysis
3. Optimization recommendations
4. Expected improvement %
5. Implementation priority

Prompt 30: Performance Tuning Recommendations

You are an expert SAP SF performance tuning specialist.

Task: Provide performance optimization recommendations:

Areas:

1. Database tuning
 - Index optimization
 - Query rewriting
 - Partition strategy
2. Application tuning
 - Caching strategy
 - Async processing
 - Batch optimization
3. Infrastructure tuning
 - Load balancing
 - Scaling strategy
 - Resource allocation

Deliverables:

1. Tuning recommendation document
2. Implementation guide
3. Risk assessment
4. Performance improvement projections
5. Testing approach for validations

PART 7: ADVANCED TESTING TECHNIQUES

Advanced Technique 1: Keyword-Driven Testing

Setup Keywords:

- OpenSAP() → Launch and login
- NavigateToModule(Module) → Go to specific module
- FillForm(FieldMapping) → Fill form fields
- ClickButton(ButtonName) → Click buttons
- VerifyMessage(ExpectedMessage) → Verify message

Test Case in Keyword Format:

Keyword	Parameter1	Parameter2
OpenSAP		
NavigateToModule	EmployeeCentral	
FillForm	FirstName	John
FillForm	LastName	Doe
ClickButton	Save	
VerifyMessage	Success	Employee Created

Benefits:

- Non-technical people can write tests
- Reusable keywords
- Reduced maintenance
- Faster test creation

Advanced Technique 2: Risk-Based Testing

High-Risk Areas (Test First):

1. Payroll processing (Financial impact: High)
2. Regulatory compliance (Legal impact: High)
3. Integration points (Data integrity: High)
4. Authentication/Authorization (Security: High)

Medium-Risk Areas:

1. Reporting
2. User interface
3. Notifications

Low-Risk Areas:

1. Help text
2. Minor UI changes

Testing Strategy:

- High-risk: 80% test effort
- Medium-risk: 15% test effort
- Low-risk: 5% test effort

Advanced Technique 3: Test Pyramid Strategy

- ```

 Δ
 /\
 /\ E2E Tests (10%)
 /—\ • Complex workflows
 /\
 /—\ Integration Tests (30%)
/—\ • Module interactions
/—\ • API testing
/—\
/—\ Unit Tests (60%)
 • Individual functions
 • Data validation
 • Business rules

```

### AI-Powered Approach (After):

- Test cases created: 2,200 (AI + manual)
- Creation time: 1 month
- Execution per cycle: 7 days (parallel)
- Defects escaped: 2 (-91%)
- On-time go-live: ✓

### Results:

- Timeline: 4 weeks saved = ₹40L cost savings
- Quality: 91% fewer production defects
- Efficiency: 300% more test cases
- Effort: 40% fewer testing staff needed

**ROI: 5:1 (₹5L investment, ₹25L+ savings)**

---

## CONCLUSION

This guide gives you **30+ production-ready test automation prompts** for SAP SuccessFactors testing.

### Key Takeaways:

1. AI can generate test cases 5x faster
2. Automated testing reduces defect escape by 90%+
3. Test maintenance becomes 50% easier
4. Team can focus on exploratory & strategic testing
5. Quality improves, timelines compress

### Start Today:

1. Pick your first module (Employee Central)
2. Use Prompt 1 to generate test cases
3. Automate with Prompt 11 (Selenium)
4. Measure quality improvements

**Investment: ₹799**

**Expected ROI: 5:1+**

**Timeline to Benefit: 2 weeks**

---
